

Unit 2 Reflection

Undertaking in this project to construct a user and system manual for the Logitech ProX TKL not helped me work with my team but also taught me to teach in the very simplest manner possible. I had to ensure that the information was organized and orderly to make it easy to follow.

Logitech ProX TKL is a product that I have used myself so I honestly had a lot of fun. In my group, everyone had their own parts that I feel like we split very well, at first it was a mess but we figured it out, so distributing the tasks across everyone made it synergistic. Communication played a big role, and personally, I believe we were successful in collaborating and providing support to one another whenever necessary.

With this project, I learned how to approach textbook writing and collaboration and some of the principles of instruction design. In the case of instruction design, one of the most emphasized aspects is the user focused consideration. Overall, I am learning group work together and presenting technical instructions was a step forward; I am beginning to do them very comfortably.
